Analog Voice Terminals

A Collection of Single-Line Telephones with
Just the Features Your Business Needs

The Economical, Easy-to-Use Business Terminals

The 8100 series of Analog Voice Terminals from Lucent Technologies is specially designed with your business in mind. They're perfect for those business locations where a full-featured telephone is not necessary or cost-effective — but where you still want more built-in features than an ordinary telephone can offer.

Simple yet flexible— and at a price that's right

The 8100 Analog Voice Terminals provide the flexibility and reliability you want for your everyday business needs. The terminals have a contemporary, durable style that easily fits in with any office decor, and is perfect either for your desk or wall mounted in areas where basic voice functionality is required—such as your warehouse or employee lounge.

The series offers a range of single-line products, from the simplicity of the 8101M model to the more advanced yet still highly affordable 8110M model. Just choose the model or models that give you exactly the features you need for various business applications.

With the “basics” built right in

The 8101, 8102M, and 8110M models all come with the built-in features you expect in a business phone, such as *Hold*, *Redial*, and *Flash*—making it easy to place, receive, and transfer calls. For example, the Flash feature allows you to access a second dial tone, to take advantage of

custom-calling features such as Call Waiting and Three-Way Calling.¹

All of the 8100 series terminals, which are available in either black or white, come with hearing-aid compatible K-type handsets and can also support an array of optional specialty handsets.

For even greater communications flexibility, a built-in *data jack* lets you easily link your terminal to a fax machine or PC modem. An *adjunct jack* on the 8102M model lets you connect optional headset, speakerphone, or teleconferencing equipment to the terminal.

Compatible with your telephone system

All of the 8100 series terminals are designed for compatibility, and work with many Lucent Technologies communications systems, including the *DEFINITY*® System, *PARTNER*® System, *DIMENSION*® System, and Systems 85, 75, and 25. The 8101 model terminal is also compatible with the *MERLIN*® and *MERLIN LEGEND*® Systems.

In addition, if you use voice messaging in your business, you'll be happy to know that the 8100 series will work with your

¹ Optional custom-calling features where available.

Model 8101

Lets you put calls on hold, and even transfer them to another number.

Model 8102M

Lets you program up to 12 numbers into your terminal, for fast, one-touch dialing.
